

Rehabilitation solutions that support your inpatient and outpatient needs

Going beyond regulatory requirements

Every EHR can capture data for regulatory requirements, but that functionality is no longer enough. As the healthcare industry undergoes major shifts, rehabilitation providers must look beyond software focused only within their niche market and seek out a trusted supplier that has the resources to offer broad healthcare applications that span the entire continuum of care.

The rehabilitation care models of the future are dependent on collaborations, advanced intelligence, analytics and patient engagement tools that will do a better job of providing information and predicting issues before they arise.

Clinical, regulatory, and financial support

The *PowerChart* Rehabilitation EHR helps support the clinical, regulatory and financial needs of inpatient and outpatient pediatric and adult organizations. It is built on the Cerner *Millennium*® platform used by acute care, ambulatory and physician practices around the globe.

Key benefits

PowerChart® Rehabilitation helps offer clinical and organizational benefits, including:

- An enhanced clinical experience with rehabilitation-focused workflows that support the needs of your care team.
- An IRF-PAI integration with UDSMR® and exports for eRehabData® can help save time and reduce transcription errors.
- Dashboard views of key patient information such as therapy minutes, authorizations, visit counts and future appointments.
- Helps inpatient organizations stay compliant with team conference discussions and Individual Overall Plan of Care (IOPC) requirements.
- Helps outpatient organizations stay compliant with progress note and plan of care certification requirements.

For inpatient organizations

Our inpatient offering supports the needs of the entire care team, including therapists, nurses, physiatrists, managers, coordinators and techs.

The EHR facilitates communication between multiple venues of care and supports the coordination of treatments, helping you to stay compliant and to optimize your Inpatient Rehabilitation Facility Patient Assessment Instrument (IRF-PAI) submissions. Advanced functionality enhances the user experience and derives submission scores while supporting regulatory requirements for inpatient rehabilitation service.

The EHR features an industry-leading integration with Uniform Data System for Medical Rehabilitation (UDSMR), as well as exports compatible with eRehabData, to facilitate workflows that can help save time, and help reduce manual transcription errors when transmitting the IRF-PAI data.

Accurate documentation is critical to understanding the condition of the patients under your care. *CareTracker*® for inpatient rehabilitation enables caregivers to record daily documentation using iPads® and wall-mounted touch-screen kiosks so they can capture complete, accurate information on the patient's condition at the point of care.

For outpatient organizations

From registration and scheduling to clinical workflows, our integrated solutions are designed to work together and include documentation tailored to the rehabilitative workflow, supporting the needs of physical therapists, occupational therapists and speech therapists. Our efficient workflows include discipline-specific, standardized, task-based documentation with embedded system intelligence to help you maintain regulatory compliance.

Cerner includes authorization management to track patient insurance authorizations as well as Medicare therapy cap amounts and supports your organization in its goals to stay compliant with progress note and plan of care certification

requirements. The Outpatient Rehabilitation Organizer will notify your therapist to request additional approvals when the authorization limit is approaching.

About Cerner

We're continuously building on our foundation of intelligent solutions for the healthcare industry. Our technologies connect people and systems, and our wide range of services support the clinical, financial and operational needs of organizations of every size.
